Install & Update Guide

Daytona Twin Tec — Windows 7 through Windows 11

Must be connected to the internet for all steps.

New/Fresh Install Procedure

1   Download and run the TCFI Software Installer.

https://daytona-twintec.com/content/DTT/Software/TCFI_Software_Installer.exe

2   Download and run the Launcher Update (Auto Extract EXE).

https://daytona-twintec.com/content/DTT/Software/M8FI-TCFI-G7G8G9_Latest_Launcher_Update.exe

3   From your desktop, run **TCFI Launcher**.

4   Update the software:

- Click the button: **Check For Software Update**.

- When prompted, **Save** the file.

- The file will auto run.

- Click **OK** to elevate permissions (UAC).

- Click **Extract**. Do **not** change the destination folder (correct for most Windows 7–11 installs).

- If asked to replace files, choose **Yes to All**.

- Back in TCFI Launcher, click the software to run: **PC_Link** or **TCFI_Log**.

Tip: If you have trouble connecting to devices, update to the latest FTDI USB Drivers. From the launcher, click **"Read USB Driver PC Version Compare To Latest Version"**. It reads your PC's driver and the latest available online; if an update is required, you'll be sent to the correct link with instructions.

Existing Install Procedure

Ensure all Daytona Twin Tec software is closed before starting.

1   Close all DTT tuning software on your PC.

2   Download and run the Launcher Update (Auto Extract EXE).

     `https://daytona-twintec.com/content/DTT/Software/M8FI-TCFI-G7G8G9_Latest`
     `_Launcher_Update.exe`

3   From your desktop, run **TCFI Launcher**.

4   Update the software:

- Click **Check For Software Update**.

- When prompted, **Save** the file.

- The file will auto run.

- Click **OK** to elevate permissions (UAC).

- Click **Extract**. Do **not** change the destination folder (correct for most Windows 7–11 installs).

- If asked to replace files, choose **Yes to All**.

- Back in TCFI Launcher, click the software to run: **PC_Link** or **TCFI_Log**.
